

✓ Weather modelling using the Qudratic Equation

```
1 #quadratic equation y=ax^2+bx+c
2 a=3
3 b=4
4 c=5
5 x=4,5
6
7 y=a*x*x+b*x+c
8 print("For the values of ",a, " ",b," ",c,"Y is : ",y)
```

 For the values of 3 4 5 Y is : 83.75
